CrewNews

US News Unbiased

"In seeking truth you have to get both sides of the story"
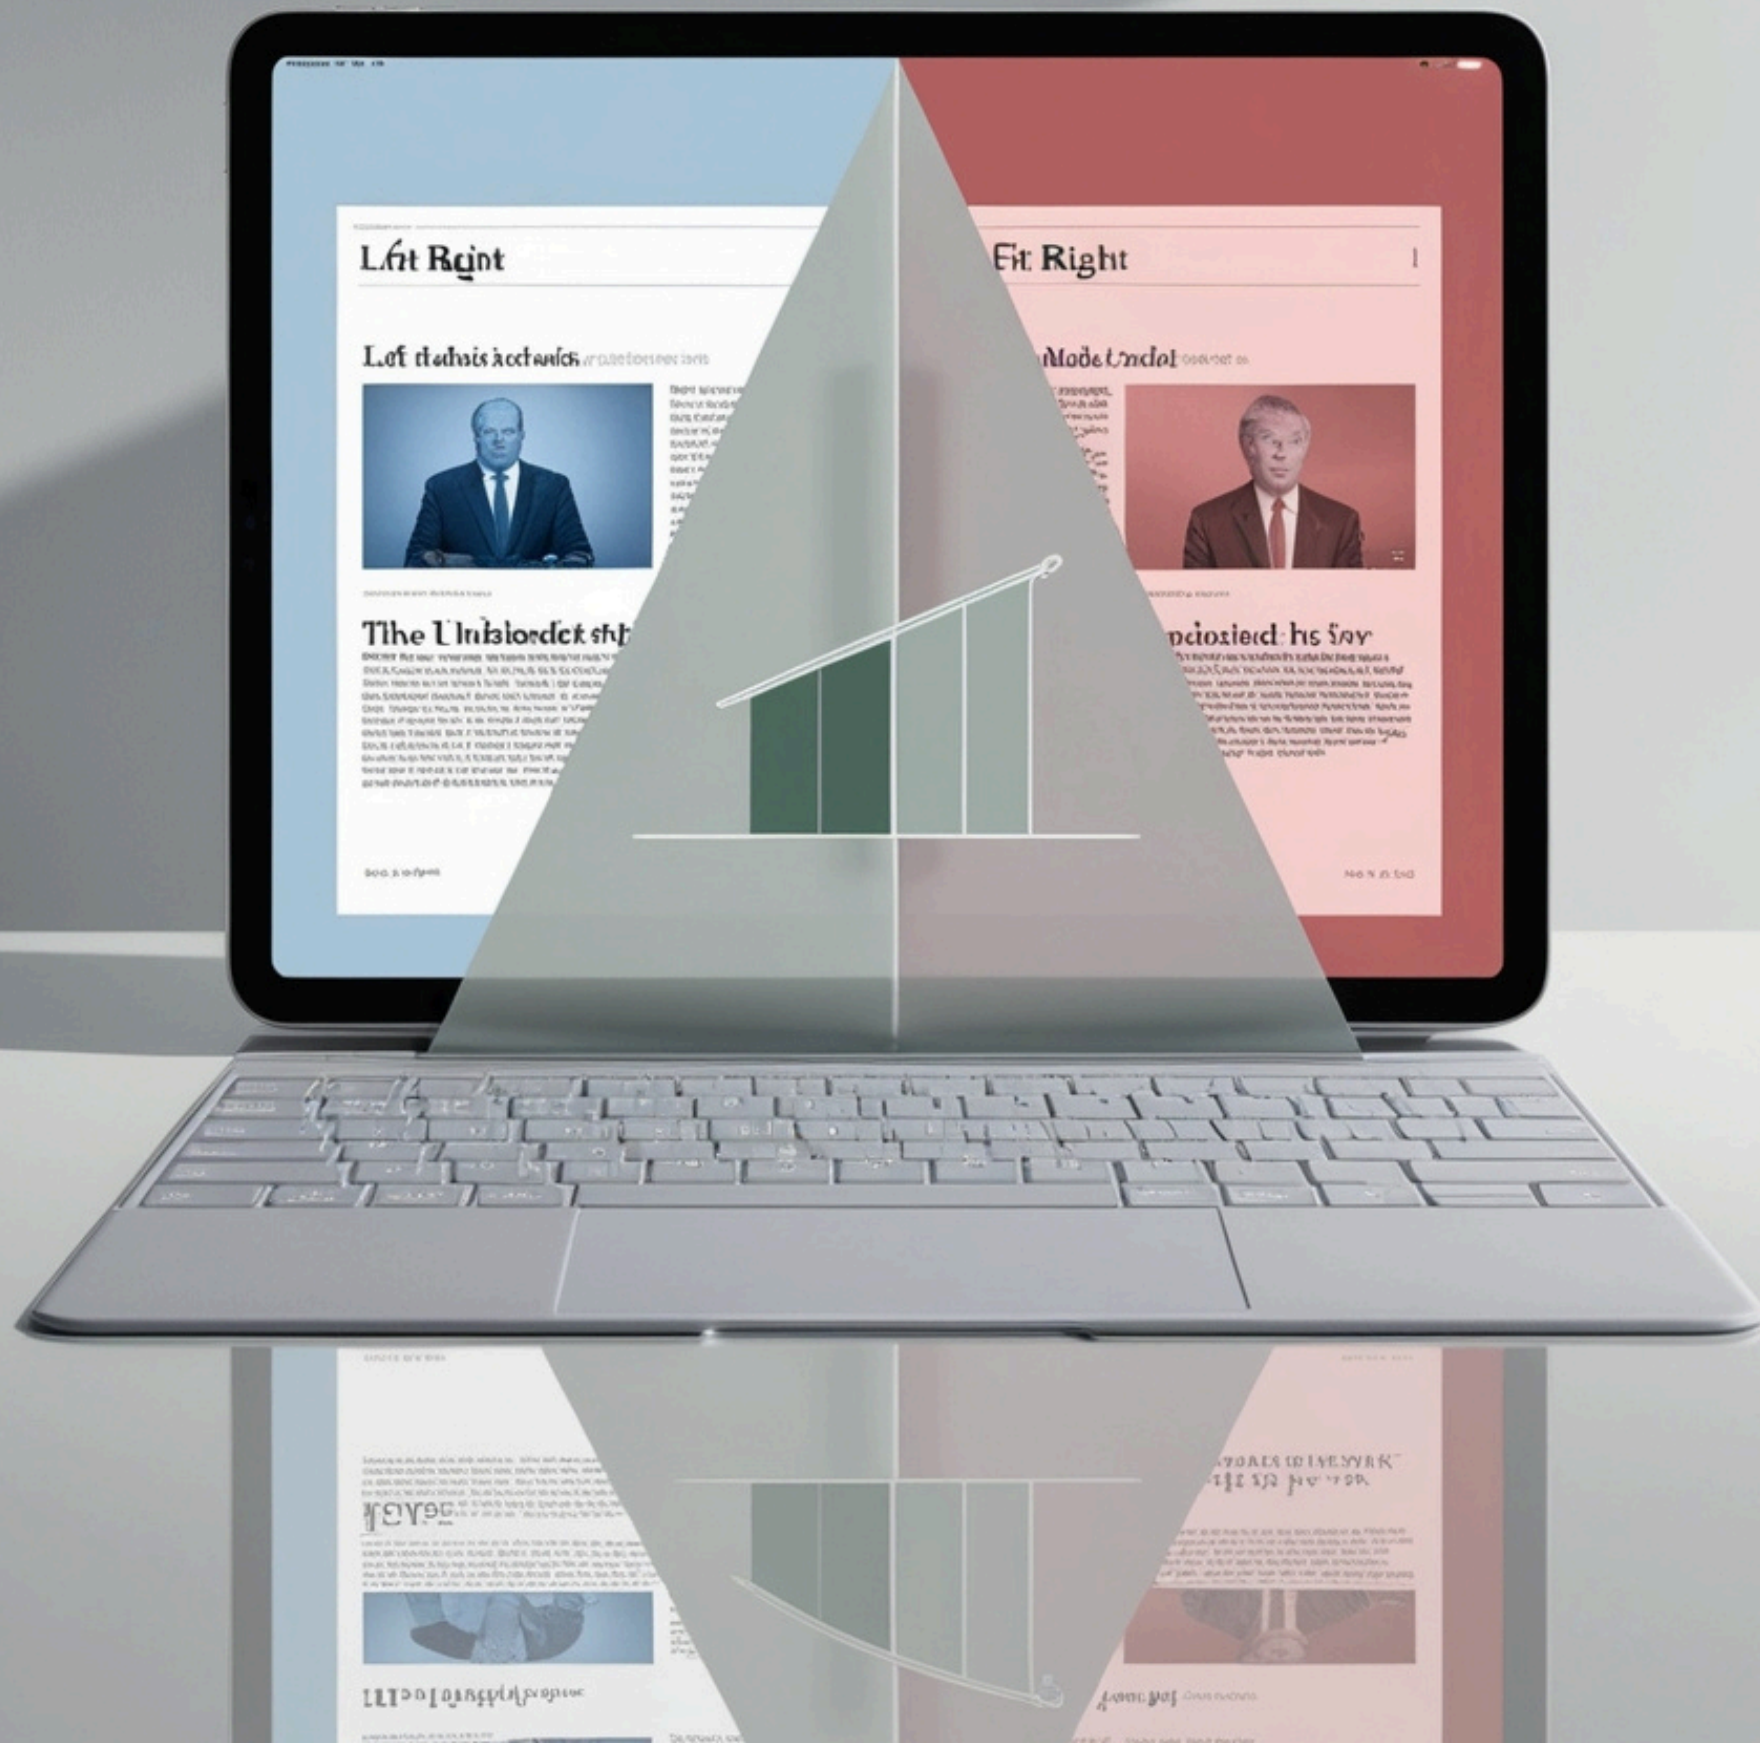

— Walter Cronkite

Made with ❤️ by Rok Benko

Problem

Biases in news reporting can distort public perception, leading to a skewed understanding of important issues and events.

When media outlets present information from a single perspective, they risk creating echo chambers where only certain viewpoints are amplified while others are silenced.
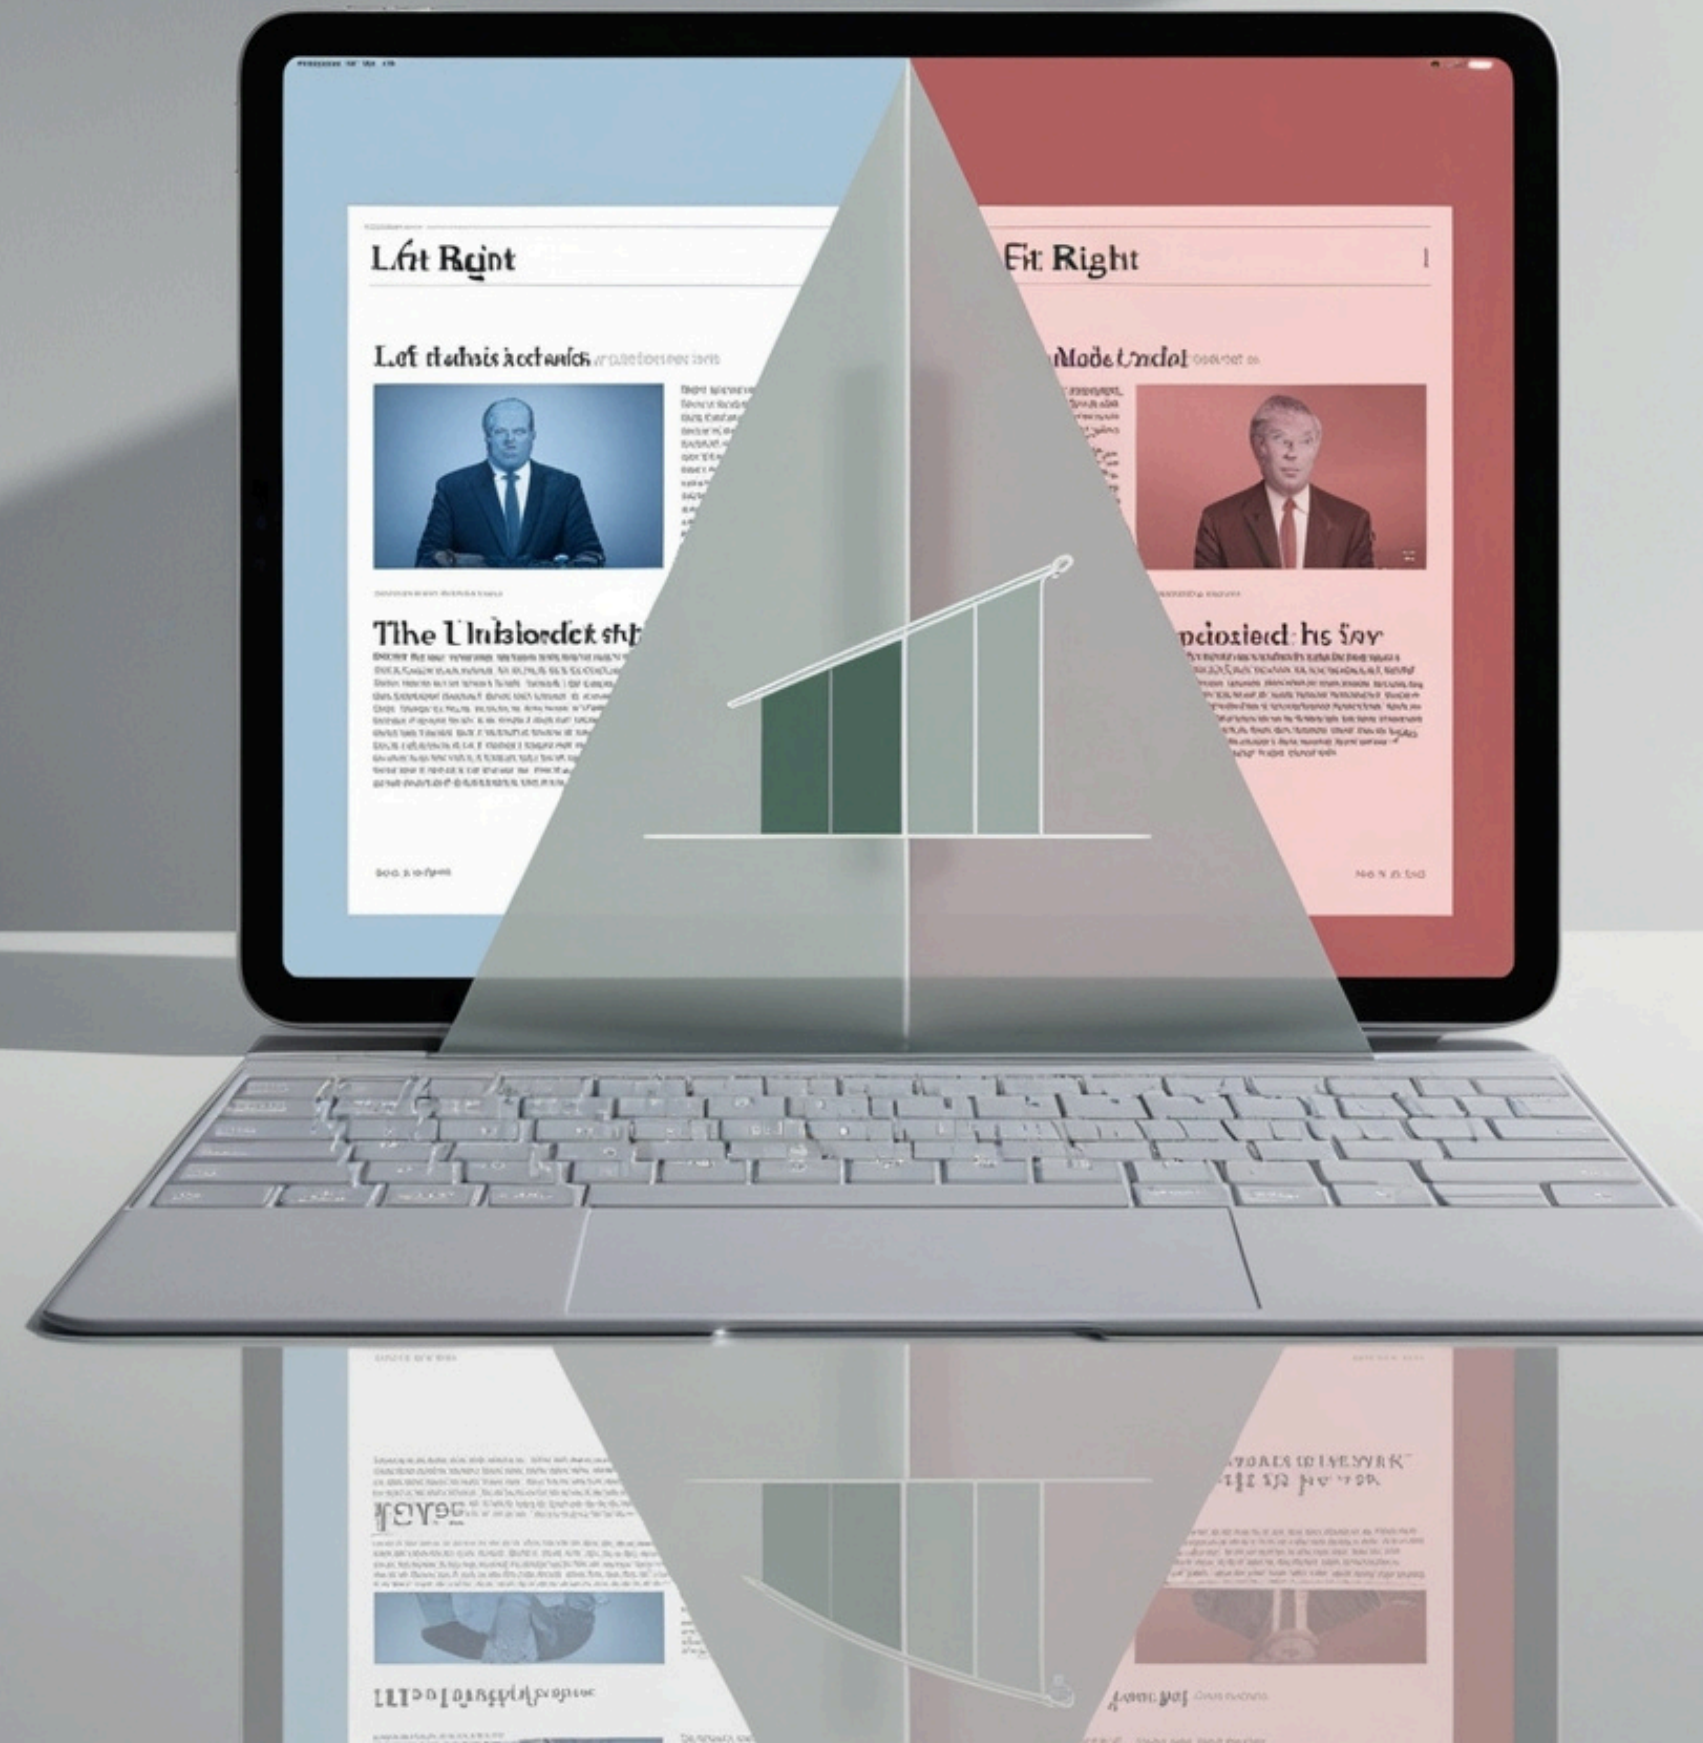

This not only undermines the integrity of journalism but also affects how individuals form opinions and make decisions based on incomplete information.

Solution

CrewNews addresses this critical issue by actively sourcing and presenting content from a diverse range of media providers from the United States, ensuring that multiple perspectives are represented in each report.

By utilizing advanced AI technologies, CrewNews fosters a more balanced discourse, empowering users to hear all sides of the story for a given question or topic and come closer to the truth.

How CrewNews Works?

1. The user inputs a question or news topic.
2. CrewNews activates an agent to source media providers representing various political viewpoints—left, center, and right.
3. CrewNews activates an agent to get web domain URLs of media providers.
4. CrewNews activates an agent to search for news articles on the given question or topic.
5. CrewNews activates an agent to scrape news articles.
6. CrewNews activates an agent to write an unbiased news report.
